Point of contact(s) on-site and cell number(s):

Name:

Number:

Physical address for the crew to report and check-in:

Address:

CHECKLIST

- Clear the vents and test end seals pressure
- Blown the water out of the casing to ensure a good fill on the morning of arrival
- Identify the type of connection on the vent pipes (circle)
Flange or Threaded pipe
Diameter:
- Identify how close can the wax pump truck get to the end vent connection
- Determine the length of hose needed (Cold weather conditions require shorter distances to prevent wax from cooling in the lines)
- Conduct pressure test on pipes
60 min: 5-psi for boot seal, 10-psi for link seal
- Confirm all PPE requirements are met
- Confirm all safety meeting requirements are met
- Set meeting location and time. Is a site escort required?
- Complete procedures for signing in, getting badged, etc
- Secure contractor for traffic control (if needed)
